

PRODUCTIVITY
MORE SQUARE FEET PER MAN HOUR

DECK FASTER

with Symons DeckFast™

Your Old-Fashioned Shoring Methods Are Costing You Money!

Even if you could use conventional shoring methods for FREE, renting the DeckFast system would save you time and money on most multi-story, flat slab forming projects.

The super-fast and simple two-piece DeckFast system is 3X faster than conventional shoring. Setting and stripping equipment is dramatically faster and safer because the majority of the work is done from the existing deck.

DeckFast easily adjusts for concrete deck heights up to 18'-11" and slab thicknesses up to 12" without the typical extra engineering, stacked frames and loose plywood decking of conventional shoring.

DeckFast requires LESS labor, LESS parts and LESS engineering, while providing MORE productivity, MORE safety and MORE profits for your concrete forming operations. Deck Fast with DeckFast.

Get ready-to-pour deck support in hours vs. days.
