MORE SQUARE FEET PER MAN HOUR

JUMP START

YOUR NEXT HIGH-RISE WITH SPACE-LIFT™

Keep your gangforms off the ground and on the wall.

Form shear walls and towers, even those with curved surfaces.

Form more concrete with less crane time using the new Space-Lift jump form system!

The new Space-Lift system keeps forming off the ground and on the wall. Concrete shear walls and towers, even those with curved surfaces, can be cycled faster and moved in minutes with the Space-Lift system. The self-contained assembly, including adjustable landing bracket, fast pin connections, retractable forming carriage, safe work platform and trailing finishing platform, keeps forming operations close to the action. Best of all, almost any Symons forming system, including Steel-Ply®, Max-A-Form®, Flex-Form®, Alispoly™ and Versiform®, can be attached to the Space-Lift assembly for the duration of the project.
